

## Ducati Panigale V2 Accessories

### 1. Complete titanium exhaust assembly

Exclusively developed by Akrapovič for 1299 Panigale R Final Edition, it is the most advanced complete racing exhaust system available on the market. Each section of the system is manufactured in a special Titanium alloy, with TIG (Tungsten Inert Gas) welding, which is both lightweight and resistant to high temperatures. The dedicated exhaust system adds a legendary sound to the twin cylinder by Ducati. The dedicated racing mapping significantly increases bike performance. System is designed in such a way to allow using the side stand; the lower carbon side fairings, with dedicated livery, are supplied with the bike.

### 2. Titanium racing silencers

The best for a slip-on system; Akrapovič painstaking care gleams through design and performance. An investment in terms of torque and power output. The kit includes up-map key for uploading the specific map.

### 3. Titanium racing manifolds

Developed in collaboration with Akrapovič, they come complete with up-map key for uploading the race mapping, and carbon fiber heat guard. They transform the two racing silencers into a powerful and complete lightweight system.

### 4. Carbon front mudguard

This exotic material further enhances the sporty demeanor of this new Superbike.

### 5. Carbon rear mudguard

Compatible with track use tires and tire warmers. A clean streamlined design with a decidedly racing style.

### 6. Carbon number plate holder

It adds an assertive style to the rear end of the Panigale V4. The carbon fibre and the shorter line enhance the look of the bike compared to the standard version. Practical and quick to disassemble if used on the track. It allows for a safe and hidden housing for cables.

### 7. Bigger headlight fairing

Created in collaboration with Ducati Corse, it is directly inspired by the one used in the SBK world championship. Made of very high-quality transparent plastic, increased in height by 40 mm and in length by 46 mm, to significantly improve aerodynamic protection from low

speeds and achieve maximum performance on the track. The linear but assertive design ties in perfectly with the bike's aggressive look.

#### **8. Clutch fluid reservoir**

The unmistakable Ducati design is combined with Rizoma's experience to create an invaluable accessory made entirely in Italy. Made from billet aluminium, it maintains its original appearance over time thanks to high quality anodising and CNC machining. A detail that represents the perfect combination of functionality and aesthetics, further accentuating the motorbike's distinct racing look.

#### **9. Brake fluid reservoir**

The unmistakable Ducati design is combined with Rizoma's experience to create an invaluable accessory, made entirely in Italy, that reflects Borgo Panigale's sporting vocation. Made from billet aluminium, it maintains its original appearance over time thanks to high quality anodising and CNC machining. A detail that represents the perfect combination of functionality and aesthetics, enhancing the motorbike's aggressive look.

#### **10. Billet aluminium handlebar balancing weights**

The unmistakable Ducati design is combined with Rizoma's experience in this fine accessory, which not only offers protection for the handlebar in the event of a fall, but also reduces vibrations. Made from billet aluminium, the high quality of anodising and CNC machining allow it to maintain its original appearance over time. The elegant finishes make the bike's look that extra bit bolder.

#### **11. Billet aluminium tank cap**

The unmistakable Ducati design is combined with Rizoma's experience to create a unique detail, made entirely in Italy, which enhances the bike's aesthetics. Made from billet aluminium, it maintains its original appearance over time thanks to high quality anodising. Equipped with an anti-tamper system to guarantee maximum safety. The special key supplied, which reproduces the Ducati shield, makes this accessory stand out for its design and makes refuelling much faster, in a perfect combination of functionality and style.

#### **12. Brake lever protection**

The unmistakable Ducati design is combined with Rizoma's experience in an accessory that was developed to improve rider safety, preventing accidental front brake activation. Equipped with a left counterweight to ensure maximum stability. The high quality anodising maintains its original appearance over time and the refined design enhances the bike's sporting spirit.

### 13. Brake lever

Made with 3D machining and featuring a sporty line. Adjustable and articulated to reduce the possibility of breakage. Lightness and aerodynamics coupled with excellent grip provide a high level of performance. Developed in partnership with Rizoma.

### 14. Clutch lever

Made with 3D machining and featuring a sporty line. Adjustable and articulated to reduce the possibility of breakage. Lightness and aerodynamics coupled with excellent grip provide a high level of performance. Developed in partnership with Rizoma.

### 15. Pair of handgrips

Inspired by the racing world, these handgrips ensure an excellent grip in every riding situation. Built to avoid accidental slipping of the hand and to reduce the vibrations felt.

### 16. Front fork slider

The unmistakable Ducati design is combined with Rizoma's experience to create an invaluable accessory, made of high quality anodised aluminium, which protects the fork in the event of a fall. The high-quality machining adds a touch of style that enriches the front end of the bike.

### 17. DDA kit including GPS module

The electronic finish line feature and instrument panel time display are supplemented by the acquisition of trajectories, speed, RPM, gear, throttle opening angle, and electronic systems operation. Thanks to the software provided, multiple sessions can be analysed. Equipped with memory support capable of capturing data for about 25 hours of motorcycle use.

### 18. Ducati Multimedia System

Practical infotainment system to: connect the smartphone, Ducati satellite navigators, Ducati rider and passenger headsets via Bluetooth, and make the most of all the comforts that the bike has to offer.

### 19. Pair of LED turn indicators

Kit composed of two LED turn indicators with high brightness. Light and compact, they combine the excellent technical features with a low profile that enhances the design of the rear end and the assertive look of the motorbike.

## 20. Rider comfort seat

The seat height, increased by 20 mm compared to the standard version, combined with the more compact foam, thicker padding and technical fabric cover, offers maximum support and minimises rider fatigue, thereby significantly improving riding comfort.

## 21. Racing seat in technical fabric

Comfort is guaranteed thanks to the neoprene. Excellent grip is guaranteed by the covering and shape, designed to maximise rider stability. An accessory made with the highest quality materials, which offers unprecedented riding comfort and gives the bike an even sportier look.

## 22. Soft tank bag

Made of durable technical fabric. Designed for maximum stability even at high speeds.
